MEDICAL COLLEGE

PENNSYLVANIA

Surfeyte, age, and ſickenes, are enemyes all to health,
Medicines to mende the body excell all worldly wealth:
Pacſicke ſhall ſtonde, and in daunger will giue eare,
Till death vnknit the louelokes of no longer dre endure.

N. VOLNEY LUDWICK, M.D., Sc.D., F.A.C.R., Professor of Radiology; Chairman, Committee on Admissions

DEDICATED

For his warm friendship, most vividly recalled by those of us whom, as prospective freshmen, he interviewed,

For his advice and counsel,

But, most of all, for his genuine interest in the student body, perhaps best exemplified by his little-publicized periodical visits to the Registrar's office to inquire of the progress of "his students,"

We, the Class of 1959, are proud and pleased to dedicate this *Medic* to Dr. N. Volney Ludwick.

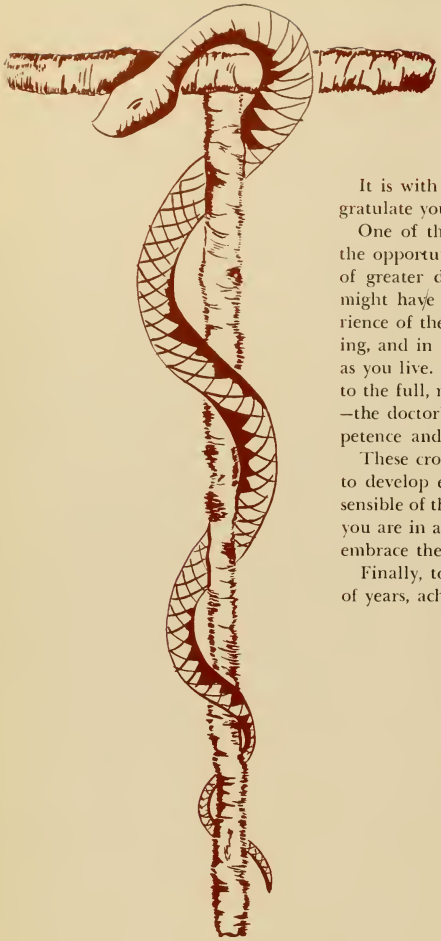
with sincere

APPRECIATION

MISS ALICE BRITT, B.S. in Ed.

With sentiments of fondness and deep appreciation we set down these words. We hope only that they will convey a bit of the gratitude and sense of indebtedness that we feel toward our registrar, Miss Alice Britt.

For her kindnesses—our thanks; for her patience—our admiration; for her continued well-being—our prayers and best wishes; for the part she played in our medical school years—a secure place in our memories.



It is with deep satisfaction that I greet you now as doctors, and congratulate you on the occasion of your achievement of a long-sought goal.

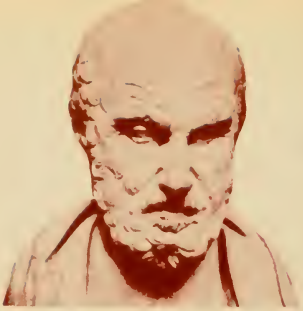
One of the more rewarding dividends of the practice of medicine is the opportunity for continuing growth which it affords—an opportunity of greater dimensions, perhaps, than exists in any other pursuit you might have chosen. Traditionally we think of "education" as an experience of the young formative years. But medicine is a lifetime of learning, and in this sense, yours is the privilege of remaining young as long as you live. I earnestly hope that each of you will exercise that privilege to the full, recognizing that your formal right to hold life in your hand —the doctor's degree—is but the prologue to acquiring the kind of competence and judgment which such an awesome right morally requires.

These crowded years of indoctrination have afforded you little chance to develop extra-professional, or cultural, interests; yet I hope you are sensible of the value of such interests in the life of a doctor and that when you are in a position to regulate your time, as you soon will be, you will embrace them. They can enrich your years beyond measure.

Finally, to each of you, I extend my heartfelt wish for a full measure of years, achievement and satisfaction.

CHARLES S. CAMERON, M.D.
Dean

to the Noblest Profession



THE OATH

I SWEAR by Apollo the physician and Æsculapius & Health & All-heal & all the gods & goddesses that according to my ability & judgement

I WILL KEEP THIS OATH

& this stipulation-to reckon him who taught me this Art equally dear to me as my parents to share my substance with him & relieve his necessities if required, to look upon his offspring in the same footing as my own brothers & to teach them this Art if they shall wish to learn it,

WITHOUT FEE OR STIPULATION

& that by precept lecture & every other mode of instruction I will impart a knowledge of the Art to my own sons & those of my teachers & disciples bound by a stipulation & oath

ACCORDING TO THE LAW OF MEDICINE

but to none others I will follow the system of regimen which according to my ability & judgement I consider

FOR THE BENEFIT OF MY PATIENTS

& abstain from whatever is deleterious & mischievous. I will give no deadly medicine to any one if asked nor suggest any such counsel & in like manner I will not give to a woman a pessary to produce abortion WITH PURITY & WITH HOLINESS I WILL PASS MY LIFE & PRACTICE MY ART

I will not cut persons labouring under the stone, but will leave this to be done by men who are practitioners of this work. Into whatever houses I enter, I will go into them for the benefit of the sick & will abstain from every voluntary act of mischief & corruption; AND FURTHER from the seduction of females or males of freemen & slaves.

Whatever in connection with my professional practice or not in connection with it I see or hear in the life of men which ought not to be spoken of abroad, I WILL NOT DIVULGE as reckoning that all such should be kept secret.

While I continue to keep this Oath unviolated, may it be granted to me to enjoy life & the practice of the Art respected by all men in all times!

But should I trespass & violate this Oath may the reverse be my lot!

THE OATH AND PRAYER OF MAIMONIDES

THE ETERNAL PROVIDENCE HAS APPOINTED ME to watch over the life and health of Thy creatures. May the love for my art actuate me at all times; may neither avarice, nor miserliness, nor the thirst for glory, nor for a great reputation engage my mind; for the enemies of Truth and Philanthropy could easily deceive me and make me forgetful of my lofty aim of doing good to Thy children.

May I never see in the patient anything but a fellow creature in pain.

Grant me strength, time and opportunity always to correct what I have acquired, always to extend its domain; for knowledge is immense and the spirit of man can extend infinitely to enrich itself daily with new requirements. Today he can discover his errors of yesterday and tomorrow he may obtain a new light on what he thinks himself sure of today.

O God, Thou has appointed me to watch over the life and death of Thy creatures; here I am ready for my vocation.

And now I turn unto my calling:

O stand by me, my God, in this truly important task;
Grant me success! For—
Without Thy loving counsel and support,
Man can avail but naught.
Inspire me with true love for this my art
And for Thy creatures,
O grant—
That neither greed for gain, nor thirst for fame, nor vain ambition,
May interfere with my activity.
For these I know are enemies of Truth and Love of men,
And might beguile one in profession
From furthering the welfare of Thy creatures.
O strengthen me.
Grant energy unto both body and the soul
That I might e'er unhindered ready be
To mitigate the woes,
Sustain and help
The rich and poor, the good and bad, enemy and friend
O let me e'er behold in the afflicted and suffering,
Only the human being.

"Medical training has for certain types of people a ripening influence that no other field of education possesses. Aside from the habits of hard work that it demands, it embraces a broad survey of the biological field, enforces a considered correlation of the fundamental sciences, and, on the human side, brings the thoughtful student face to face with the emotional struggles, the misery, the courage and cowardice, of his fellow creatures—to say nothing of the familiarity it gives him with sociological conditions, vice, crime, and poverty. There is in it a balanced education of the mind and the spirit which, in those strong enough to take it, hardens the intellect and deepens the sympathy for human suffering and misfortune."

Hans Zinsser, M.D.

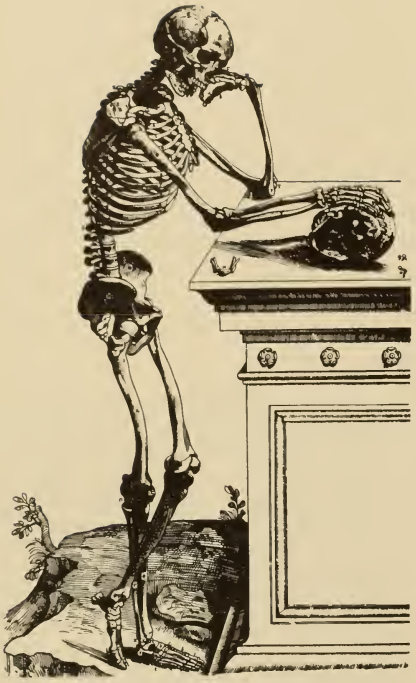
Associate Dean

Anatomy



Anatomy is defined as the study of the human bod by the method of dissection. Its birth as a science is r corded many centuries before the Christian era. Bein the oldest division of the discipline of medicine, it only fitting that by means of its study and its metho the student begins his journey into knowledge. The fir subject to be studied, it is likewise the first to nurtur and strengthen those attributes and qualities so essenti to the physician: for there is patience in dissection, pe severance in memorization, and the exercise of intelle tion in the perception of significant relationships.

Too often the debt of the student to his teacher is a but forgotten; not so in anatomy where the names of th great workers have been enshrined in the nomenclatur —Galen, Malphigi, Hunter, Stensen, His and countles others. The debt owed to these, our teachers of time pas is inestimable: many worked under adverse condition frequently in defiance of existing laws; the references t which they had access were meager and often inaccurate their only encouragement lay in their insatiable desir to dispel ignorance and to clarify doubt. We realiz with gratitude that upon their labors and their life work our present knowledge is constructed.

Histology

Birth of a Homunculus

Through the looking glass

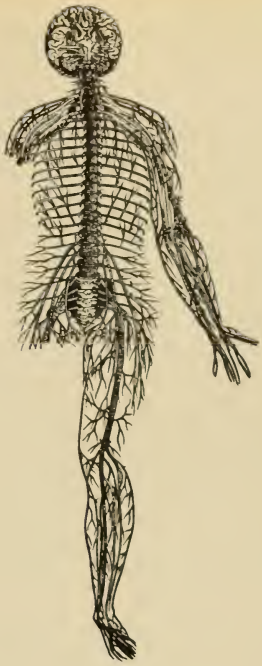
Dr. J. B. VanDyke

It was inevitable that in his study of the body man could not long be confined to those structures visible only to the unaided eye. With the development of the invaluable adjunct of microscopy attention was turned to the finer structure of cells, tissues, and organs. In 1839 Theodore Schwann laid the foundations of the now celebrated "cell theory." These great strides toward a more thorough knowledge of human structure represented the beginning of a new science, Histology.

NIGHT AND DAY

Dr. Raymond C. Truex

"Takes more than a one tract mind"



The nervous system from the Fabrica, 1543

Neuroanatomy

With the advent of Neuroanatomy, the morbid chant of "On old Olympus" filled the halls, and we were ushered into the confusing world of neurons and basal ganglia.

In his slow, casual approach Dr. Raymond Truex assured us that it would "all come together in the end," and plagued us with questions such as "Given: parasthesias, right big toe, hiccoughs, and vertigo, locate the lesion."

A truly brain-washed group were we.

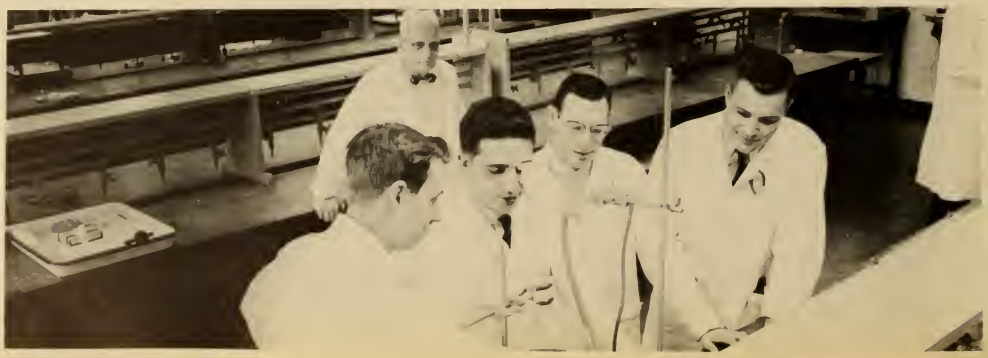
M. John Boyd, Ph.D.
Professor and Head, Department of Biochemistry

Biochemistry

On the third floor we entered the bewildering world of enzymes, nucleic acid, special diets, bottles in paper bags and venipunctures, electrolytes and vagaries of Henderson-Hesselbach. The bible of Cantarow and Schepartz proved to be a better sedative than Fulton. Weekly "nugget sessions" and the quaint Manila envelopes gently reminded us that this branch of chemistry unheard of before the 1900's as a field of its own, would bring us to our knees.

We completed the course with the finest examples of forearm ecchymoses available to the medical profession and looked hopefully forward to the day when our daily organic callings would not become transportation problems.

Dr. Joseph S. DeFrates



One more drop will do it

Dr. Alper

Dr. Peter Oesper

Dr. Arthur W. Wase

Dr. Jay S. Roth

John C. Scott, Ph.D.
Professor and Head of Department of Physiology

If any course in medical school could be characterized as a slow painstaking progression from one pitfall to the next, physiology would be it! Can anyone possibly forget:

The kymographs, electricpens, muscle preparations which never seemed to cooperate sufficiently to produce a desired record.

The hostility, so frequently overtly expressed, of classmates towards apparatus or laboratory partner, or both.

The Saturday morning quizzes wherein we were introduced to a new concept in the objective type of examination.

The attempts by our professors to elucidate some of the finer points of the circulation schema.

The number of classmates sporting gold-mercury amalgam jewelry at the conclusion of experiments utilizing the Van Slyke apparatus.

These and similar incidents are readily recalled, while the more important fact that we gained some sound basic physiological concepts is often overlooked. What we remember can be attributed mostly to our own clumsiness and inexperience; what we learned can be attributed in large part, to Dr. Scott's interest, Dr. Reed's patience, Dr. Wiercinski's sympathy, Mr. Foster's humor, and Mr. Bechtel's encouragement.

Pathology

As is our pathology
So is our practice

OSLER

In the accumulation of medical knowledge, isolated subjects as well as isolated facts cannot long survive in man's fragile memory. Their viability requires that they be bound and linked into an integrated whole—and so it is that the student of medicine fits his facts into the unifying framework of pathology. A consideration of its place in the curriculum makes apparent its vast importance: during the first year of school the student delves into the normally functioning body; pathology deals with the derangements of normal anatomy and physiology as they occur in various disease states and so points toward the study of clinical medicine. Pathology is then the bridge that spans the hiatus between the basic sciences and the clinical years of study.

Overuse atrophy?

Joseph E. Imbriglia, M.D.
Professor and Head, Department of Pathology

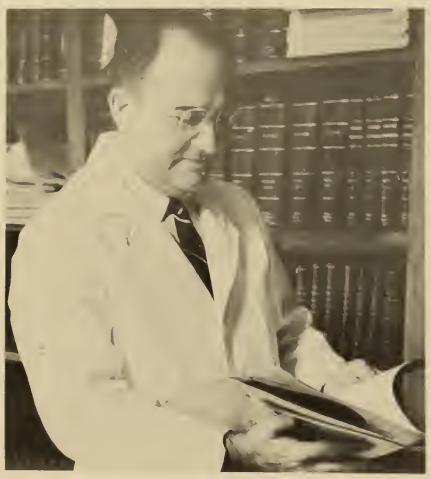
Dr. E. Karl Koiwai

Dr. Robert E. Bovard

Autopsy at Surgeons Hall (Engraving by Hogarth)

René Descartes' giant microscope had tubes filled with clear well-water.

Clinical Pathology



Rosario Maniglia, M.D.

The study of pathology is more than the gross and microscopic alterations in structures that are unearthed at the necropsy table. Indeed, these abnormalities are but the end stage reflecting dynamic derangements of physiology and biochemistry in the living state. The detection of these derangements by controlled laboratory methods has given rise to the maiden science of clinical pathology. Advances in this field of medicine have been most rapid in the last few decades and the information provided assumes ever increasing importance in the total clinical picture of disease.

Microbiology

The study of Bacteriology grew from man's search for the cause of ills afflicting him. In the Book of Leviticus the dangers of contact with lepers are recorded—the first realization of the contagiousness of disease. Frascatorious, in the Middle Ages, postulated a living agent as the source of syphilis, thus first proposing a true germ theory. But the confirmation of this theory as fact had to await the invention of the microscope, an accomplishment attributed to the Italian master, Galileo. With the aid of this valuable instrument Leeuwenhoek, in the seventeenth century discovered the existence of bacteria. A century later, Pasteur demonstrated the air-borne nature of bacteria thus tolling the death knell of the "Spontaneous generation" theory and at the same time giving birth to the theory of surgical asepsis, as elucidated by Lister. The names of Koch, Jenner, and Fleming remind us, finally, of the important therapeutic contributions of this science.

It was the task of Dr. Amedeo Bondi and the members of his department to bring to us, as students, a method and approach to the study of Microbiology. It was our privilege to grasp in some small way a body of factual knowledge which was the fruit of centuries of study, reflecting the beloved labor of many lives.

Final grades seminar

Joseph DiPalma, M.D.
Professor and Head, Department of Pharmacology

Pharmacology

Coming toward the end of the preclinical work, the course in pharmacology introduces the aspiring physician to the basic drugs he shall use in his practice. Stressing the pathophysiologic effect of drugs, the medic is taught rules of their dosage and given pointers in the art of dispensing them.

From his sojourn in the peculiar seventh-floor atmosphere, the informed medic shall learn:

To be humbly aware of the need for constant study of new developments in pharmacology, and to review older concepts;

To prescribe with thought and accuracy, cognizant of moral and legal obligations;

To write prescriptions—in the metric system—legibly for the pharmacist (but not too legibly for the patient);

To keep abreast of pharmaceutical house panaceas, and yet be confident of time-tested medications;

To be prudent in pharmaceutical house investments;

To rely upon the benefit of a drug in the light of what a physician's attention and/or a placebo might do under the same conditions.

Public Health

Public Bathhouse, 13th century

It was during our Sophomore year that we first came into contact with Dr. Pascal Lucchesi and the Department of Public Health. Following a series of introductory lectures and roll calls by Dr. Bogucki, field trips were taken to various parts of the city, and we were able to study the wonderful workings of that weird combination of government and medicine.

Highlights of the year were the exacting weekly quizzes (Why did Benjamin Rush fire that cannon?) and the informal attitude of the final exam, which Dr. Bogucki jokingly took with us, and topped all grades with a resounding 64. Bless that curve!

The 3rd and 4th year courses were given each Saturday morning in Klahr. This stimulating hour saw the appearance of several outstanding guest lecturers, city public health officials, visiting professors of almost everything, doctors, nurses, and several of Dr. Lucchesi's relatives.

Key subjects, ranging from mosquito control in Camden to lobbying in Harrisburg were discussed, and we came away from the course (finally!) with the knowledge that the health and welfare of the public, and the control of Salmonella in potato salad were well assured by those who serve with Public Health.

Drs. Bogucki and Lucchesi

Lecture

Medicine

Paracentesis

To define Internal Medicine is practically impossible. Encompassing as it does, pathology, surgery, hygiene, and especially physiology and bacteriology, one might be safe in stating that it deals with the study of disease, its etiology, pathogenesis, diagnosis on a therapy, exclusive of the actual performance of surgery. Such a definition might be safe—but hardly adequate.

Despite the ethereal confines, the specialty was recognized as such even during the early period of Egyptian medicine. At this time all disease was thought to be due to parasites and when these could not be demonstrated it was postulated they were invisible but none the less responsible for the pathology. The times have seen enormous changes since this parasite-minded era. But, throughout the ages Internal Medicine has retained one characteristic—that it remains a haven for the investigator, the thinker, the intellectual whose great joy lies in the solution of a complicated problem.

Two years ago Hahnemann welcomed Dr. John H. Moyer as head of the Department of Medicine. Ably assisted by a full time teaching staff, and with the continued excellent effort of our regular staff, advances in teaching, patient care, and research, have been remarkable and impressive.

Obstetrics-Gynecology

The dawn of obstetrics, in recorded literature, dates to the time of the ancient Greeks, there being several treatises on the subject in the "Corpus Hippocraticum." Midwives dominated the period, physicians being consulted for complications.

Contributions to the science were insignificant until the nineteenth century, which witnessed the inception of great discoveries and advances in the field. This included the work of Semmelweiss on puerperal sepsis, of John Braxton Hicks on the management of abnormal presentations, and of Ludwig Bandl on obstructed labors, to cite but a few.

Because so much of present gynecology is of a surgical and endocrinologic nature, we can find practically no reference to it in the writings of old. It is properly an offspring of our own century, partaking as has all medicine since 1900, in rapid theoretical and technical development.

Surgery

General surgery and the six surgical specialties are being transformed into new programs for graduate and undergraduate Hahnemann. The past year has felt the vigors of the new head and a changed department.

With more responsibilities relegated at both ends of the training ladder, the 1959 senior was in the middle of that ladder, busy in Applied Sophomore Surgery. The new program with its exclusion of seniors from very needed outpatient training, was slightly redeemed by the surgical conferences. Attracting more outside surgeons for their varied views, and with a stimulus to correlate pathology with the cases presented, the conferences were well-attended by students, house and visiting staff alike.

Surgical research has been encouraged by new grants; the teaching staff has sought newer methods for diagnosis and treatment. Students and house staff have participated in more research projects.

The traditional Hahnemann accent has been upon the practical, the general practice preparation, the front line of medicine. Current surgical training is oriented toward academic and specialized types of medicine.

The class of 1959, the class of The Great Transition in surgery, hopes that as changes go on, that the success of preparing young physicians for competent practice shall be commensurate with the energies expended by the new department of Surgery.

"Perhaps the ability not only to acquire the confidence of the patient, but to deserve it, to see what the patient desires and needs, comes through the sixth sense we call intuition, which in turn comes from wide experience and deep sympathy for and devotion to the patient, giving to the possessor remarkable ability to achieve results."

Pediatrics

The Department of Little People's Medicine has sustained several growth-changes. Outpatients are seen in the newly renovated Hahnemann Clinic, and at the Girard College and Jane Kent Day Nursery which have been added to our affiliated services. The Seventh Floor has been renovated to handle more pediatric cases.

Formal, clinical, and bed-side conferences are given in the care of the young child from medical, dental, nutritional, and emotional viewpoints. New drugs and new methods of prophylactic medicine are discussed and applied to better care of the school child.

The traditional godfather-by-choice of the HUWA, full-time Department Head Professor Fischer is aiming his growing staff at far-reaching methods and facilities for teaching Pediatrics to the Hahnemann graduate and undergraduate student.

CLASSES

FRESHMAN CLASS

On the morning of 2 September 1958, a group of one hundred and seven men and one woman —average age, 22, average weight, 170 (ten pounds overweight but soon to change)—assembled with bright shiny faces in Classroom C. Each individual represented the "chosen one out of ten." The other nine were employed. This was the class of 1962.

The freshman class occupies a unique position in any educational institution in that to its members everything is a new and fresh experience. Those who have gone before us might enjoy reliving their freshmen experiences through some of our cogent observations.

For example, did you know that the Moderator Band is really a five piece combo appearing nightly at the Club Locus Caeruleus . . . that Hilton's line is not a chain of hotels . . . that there is a student movement to "Keep Hahnemann's Campus Green" . . . that a student was last seen trying to find his way to the Vendeteria . . . that recent statistics have proven that the life expectancy of a faculty member is three years longer than that of a student—the reason no doubt being the new elevator that hasn't been purchased yet . . . and that in order to know the abnormal, you must know the normal . . . and that we don't know the normal.

Meeting of minds over mind

SOPHOMORE CLASS

September 8, found summer vacation nothing but a memory and ninety-seven of the already infamous class of 1961 back in the fold. The prevailing thought in everyone's mind was that we had been freshmen for the last time in our lives and our first year was nothing more than a fading nightmare. Here many of us paused and recounted the words of our predecessors that came to us in the darkest hours of our freshman year, "You think this is bad, wait until you hit Pathology!" We never got the chance for any such aggressive action, as Pathology opened with a straight right to the jaw that has kept many of us off balance to this very day. "Gentlemen, Pathology is worth 46 units. Flunk this course and you are in real trouble!" With these reassuring words ringing in our ears, we jumped headfirst into the world of morbid anatomy, never to see the light of day until February 7. Who will ever forget the practicals and the orals that found us pitting ourselves against microscopic Pathology when most of us couldn't remember what the normal looked like, or the gross specimens, where an infarcted lung received diagnoses ranging from a "Cat hit by a cement truck" to a "H & H meatloaf." Then came the strangest phenomenon of all . . . through the barrage of information that had pounded us incessantly, we found ourselves making that tedious transition which was to turn bewilderment into reassurance. For the first time, confidence replaced sheer fright and we realized that Pathology was indeed the basis of medical science and we would carry our new found confidence not only into our clinical years, but for the rest of our lives as practicing physicians.

JUNIOR CLASS

What is a Junior? Hahnemann describes them as individuals whose name tags bear the number 3. Surgeons will tell you they are the only people who manage to get in the way while holding retractors. Obstetricians remember them only as inanimate objects sitting with hand outstretched hopefully and hopelessly counting contractions. Medical people think of them as eager-eyed hopefuls who feel non-existent livers and have the audacity to write in a chart, "possible A-V nicking." They are indeed a sorry lot . . . cramps in their arms from 10 page histories; cramps in their legs from 8-hour cut fests; and cramps in their . . . gluteals from 4th floor endurance tests. They are by degrees heroic, hypochondriacal, and hypocritical. Their diagnoses are brilliant; their therapeutics impossible. They are caught in a world of in-between . . . assurance tortured by doubt . . . competitiveness tempered with sacrifice. What is a Junior? They are people who do not comprehend the word hopeless, and who for the first time glory in and are humbled by the phrase, "Thank you, DOCTOR."

SENIOR CLASS

The Faculty of the Hahnemann Medical College holds its annual welcome party and meets—

THE CLASS OF 1959

Incisional opening of the curriculum in anatomy lab . . . first day—every table complete with four students . . . weeks later—cadaver replaced by pin-ball as center of interest . . . cadaver resumes center of attraction following first exam . . . Buckley begins political career as president of the class . . . stays in same rut for the next four years . . . Shaver stakes claim to three seats in the lecture hall . . . Dr. Angulo exhorts the estudents to estudy . . . students comply by studying gross in histology lab and vice versa . . . for emphasis, Dr. Van Dyke pushes blackboards up, pulls them down, and gesticulates in general . . . Spielvogel learns to pace and study at the same time . . . Adelson performs, with enthusiasm, amputation on cadaver . . . Dr. Truex supports sagging morale with promise, "Everything will come together, eventually" . . . class adopts compulsive act of intertwining fingers to illustrate foregoing remark, and waits . . . still waiting . . . Jim McKendry holds out on same . . . neuroanatomy presents with some drawings, many models, myriads of lesions . . . Paul James presents with offers of "Y" memberships . . . class holds first picnic . . . Gusack, Lesher, Joseph, Kirchner launch Perkiomen swimming season from upturned canoe . . . having done everything but bleed for Dear Old Hahnemann, students are rewarded by biochemistry department . . . allowed to bleed one another in lab . . . Roberson sets biochemistry pace with outstanding specimen production . . . Keating becomes father of the year, by twins . . . on to physiology and the spring-activated kymograph . . . Lois Leonard develops pencil-activated writing arm to match . . . O'Connor breaks out his shillelagh for St. Patrick's Day . . . Lyster attains fame as coach of now famous pin-ball squad . . . Moock establishes last stand of Homeopathy . . . so ends the first year . . .

. . . . . *and they are Sophomores* . . . . .

Sunday was travel day

Dr. Imbriglia leads off with pathology and button-down shirts . . . Pat Pironti follows up with imitation—minus the button-down shirt . . . Meisel imitates Koiwai—with multiple shirts . . . Gildea imitates Daumier—with pathology drawings . . . everyone learns to recognize liver cells . . . and draw them . . . Kashatus impressed enough to contemplate life among pathology specimens . . . the class is privileged to welcome the new dean, Dr. Charles Cameron . . . bacteriology presents pathogens, specimens, immunizations—and an impressive collection of slides depicting parasites . . . clinical pathology gets class bleeding regularly . . . psychiatry appears on the lecture schedule . . . DeSilverio impressed enough to develop likeness, noted in later years, to Dr. Johnson . . . Messey turns salesman for the benefit of *The Medic* . . . Dr. DiPalma, replete with distinctive vernacular, greets the class to pharmacology . . . staff earnestly strives with tutelage . . . Dr. Barnes earnestly strives with dramatics . . . Turner feels right at home amongst the drugs . . . Gunter and Ruderman also feel at home, sick that is, after ingesting Dr. Calesnick's test drugs . . . Pelszynski still safe from questions: no one can spell or pronounce his name . . . Dr. DiPalma learns that the class can also ask questions . . . especially Dean Arvan . . . research experiments flourish . . . science stands still . . . nicotinic acid embarrasses Bill Cook's knees to the blushing point . . . preclinical studies end, and the class moves into clinical subjects . . . and physical diagnosis . . . first patients—unruly, uncooperative, with psychogenic ills—are themselves . . . Klein, in enthusiasm for orthopedics, manages to break his ankle . . . Ninos, in comeback attempt takes to the Schuylkill . . . another picnic, and Don Miller becomes known as the class troubadour . . . and so ends the second year . . .

. . . . . *and they are Juniors* . . . . .

Lovett marries and honeymoons for two glorious days before starting school . . . and the class moves on to the floors and into the clinics . . . Chapis sets the pace in obstetrics with the first delivery . . . Cressman performs the first amniotomy, during a rectal exam . . . meanwhile, in medicine, Kreider describes the first Hutchinson teeth the class has seen—only to find that they are on a denture . . . eight o'clock lectures begin . . . half the class fails to take notice and continues to report at nine . . . everyone gets the feel of surgery—through retractor handles . . . stimulated by the gentle advice of the surgeon, they cut knots, obscure fields, and make themselves generally helpful . . . James A. Davis becomes so interested that he plans to have a look at his own thyroid at the end of the year . . . Jim Bitter continues, in these academic surroundings, to gather well-known facts about little-known syndromes . . . undaunted by nightwork, Braunschweig continues to commute . . . and, undaunted by assignment to be in two places at the same time, Hobbs sends a tape recorder to an obstetrics conference to deliver his assigned report . . . and Misenheimer endears himself to Dr. Reishstein because of his delivery-room technic . . . and vocabulary . . . medicine acquires new management . . . black-topped tubes move into a position of importance for all students with a genuine appreciation of obstetrics . . . as the class moves into pediatrics, noses begin to run, throats begin to tickle, and chests begin to wheeze . . . as the kiddies' chronic cold syndrome catches up with the students . . . and Dickran Babigian gets his first taste of honey-and-lemon . . . a therapy he will soon heartily endorse . . . and so, while Bob English prowls the halls with needles and tubes from the stat lab, the students on medicine prowl, armed with knowledge, in search of the hyperthyroids, prediabetics and diagnostic problems . . . and thus the third year ends . . .

. . . . . *and they are Seniors* . . . . .

so Bill Bovard, with his regard for animals, takes his place in the dog lab . . . and Al May, with his regard for Bach, takes his place at Klahr's console . . . and Dr. Howard takes his place as the new head of the surgery department . . . and the class members take their places as fifth assistants on the surgical team . . . the retractor of the third year is replaced by pen and paper in the fourth . . . histories and physicals are written . . . Russ Down, in the spirit of the specialist, is now noted to come to conference "by appointment only" . . . the class takes its place in the accident ward and the clinics . . . saving lives with gay abandon . . . while, on medicine, Naughten finds there are still things to learn—close the window on the signoidoscope . . . and Kornblum finds that at Eastern Pennsylvania Psychiatric Institute some of the patients show rare insight into their own problems—and into hers . . . Joe Hogan becomes Dr. Paxson's consultant in the matter of applying forceps . . . while Neuwalder, not *quite* as interested in obstetrics, takes Terry to the theater . . . but Al Farson, quite interested, spends one hour in scrub with an expectant mother to the tune of: "See what I mean, Jelly Bean!" . . . away they all go on affiliation . . . where Pete Reisz takes on the role of the alarm clock with: "UP, UP, EVERYBODY UP!" . . . so the class turns to the important decision of internship . . . Ed Brunner exemplifies the typical student's specificity, and becomes the proponent of the Hahnemann internship . . . while Mary Wallen prepares a list which reads like the matching program's directory—under the keep 'em guessing routine . . . with the practical side of graduation rearing its ugly head, interest turns again to the pathology department . . . ten more posts to do . . . these done, the curriculum's run . . . the fourth year ends . . .

. . . . . *AND THEY ARE PHYSICIANS* . . . . .

ACTIVITIES

Alpha Kappa Kappa

Oldest existing medical fraternity in the nation, AKK was founded in 1888 at Dartmouth Medical College. It is one of the largest organizations of its type in the world.

Beta Phi Chapter was established at Hahnemann in May, 1948 and presently acquired the chapter house on 16th, below Race. The chapter has pursued a steady course to a position of leadership on campus, introducing many innovations to Hahnemann student life. An active social program, scholastic aid with a well rounded library, monthly dinner meetings and an atmosphere of camaraderie are the goals that Beta Phi of AKK has constantly strove to provide its members. An active and interested alumni group has given generously of its time and resources to make our venture in fraternal living a successful and stable part of the Hahnemann scene.

First Row, Left to Right: P. Baker, F. DiMauro, A. Schuster, E. Pelszynski, H. Neuwalder, A. Farson. Second Row, Left to Right: J. Kamdar, A. Wahlig, V. Croft, R. DiSilverio, F. Kleckner, J. Gindhart, W. Barry, F. Cressman.

First Row, Left to Right: H. Simons, A. Spielvogel, J. Meisel, M. Blumberg, M. Wallen, D. Sherman, L. Frank, B. Abramson, M. Ruderman. *Second Row, Left to Right:* P. Kivitz, H. Cohen, A. Kellerman, K. Friedberg, A. Stein, H. Soller, M. Singer, M. Busch, S. Seidmann, T. Oslick. *Third Row, Left to Right:* F. Steinberg, B. Loigman, M. Derezin, R. Foxx, W. Stamps, M. Richman, M. Kramer, S. Spitzer, D. Rosen, A. Goldberg, I. Butler.

Members not shown: H. Yeager, S. Adelson, H. Bleckman, M. Clopper, J. Ruderman, J. Rothschild, R. Berkowitz, H. Gold, R. Shapiro, B. Friedberg, B. Sklar, L. Wurtele.

Phi Delta Epsilon

Phi Delta Epsilon medical fraternity is now more than a half century old, having been founded at Cornell University Medical School in 1904. The Beta Zeta Hahnemann chapter was chartered in 1919 and now takes its place among the 47 undergraduate chapters and 33 graduate clubs throughout the country.

The primary purpose of the fraternity is to promote the ideals of loyalty, scholarship, and friendship among its members. The chapter supports several well-attended parties during the course of the year, and a series of monthly scientific sessions at which the guest of honor is frequently a physician of local or national renown who speaks on a medical topic of current interest.

One of the highlights of the year's social activities is the annual Five Chapters Dance attended by members of the chapters of the four Philadelphia medical schools and the graduate chapter.

The chapter can be justly proud of the fine scholastic record of its members and service to Hahnemann as well as supplying a mixture of fun, fellowship, and continued advancement of the medical profession throughout the school year to its members.

First Row, Left to Right: Y. Miyazaki, P. Pratt, M. Misenhimer, J. Lupas, R. Naughten, H. Lillie. *Second Row, Left to Right:* J. Stoner, S. Puma, N. Johnson, R. Down, W. Spangler, J. Walsh.

Members not shown: R. Babigian, R. Baltz, L. Beach, J. Bitter, N. Chapis, W. Cook, R. Drewes, R. English, J. Gildea, J. Glodek, W. Kashatus, G. Keating, P. Riesz, M. Sevick, A. Crews, L. Fuller, W. Gordon, A. Lopus, D. Lucchino, W. Siefert, F. Kulbaski, W. Johnson, J. Piffat, J. Polto, J. Pulizzi, J. Madden.

Phi Beta Pi

Phi Beta Pi was established at the Medical School of the University of Pittsburgh on March 10, 1891. In the past 68 years it has flourished into a fraternity consisting of 36 active national chapters, all of which encompass the principles of social and moral unity in a brotherhood for all.

Beta Kappa Chapter was founded at Hahnemann on October 4, 1947, succeeding Pi Epsilon Rho fraternity which had been established in 1902.

The chapter owns and maintains a house on campus which furnishes living facilities for the students plus serving as a headquarters for various social functions throughout the year.

The Fraternity has a membership of 42 Brothers and is proud to list many of the faculty at Hahnemann in its membership. A full program of social and scholastic activities is sponsored by Phi Beta Pi, and is highlighted by the annual Lectureship and dinner featuring outstanding authorities in various medical fields.

"Dancing in the dark"

"Let's all sing like the birdies sing"

"Shortnin' bread"

"Dry bones"

"Cocktails for two"

"Stardust"

Phi Lambda Kappa

Phi Lambda Kappa was founded in 1906 at the University of Pennsylvania School of Medicine. The Alpha Beta Chapter was organized at Hahnemann in 1927 and since its beginning has been a great credit to the school. The purpose of the organization is to foster the spirit of fraternalism, mutual aid and moral support among the present medical student members and its graduate physicians. The high scholastic standards of its members are a reflection of the high ideals of the fraternity.

The annual Phi Lambda Kappa lectureship brings to the Hahnemann student body outstanding leaders in the various fields of medicine such as Alex Ulin and Charles P. Bailey.

Social life is far from neglected by this chapter and the Phi Lambda Kappa parties are well-known and anxiously anticipated by all the student body and their friends. Many times during the school year the house on Spruce Street with the green door is festively decorated and the passer-by can hear the merriment of a party in full swing.

Hahnemann is proud, and justly so, to claim Phi Lambda Kappa among its fine fraternities.

Reamer. *Second Row, Left to Right:* W. Hartman, P. Ironside, C. Stone, R. Leber, W. Figueroa, C. Diaz, F. James, D. Fogg, P. Keblish, J. Geissinger, D. Miller, G. Ninos, R. Caputo, C. Czarnecki, H. Soltys, C. Henry, R. Cavalier, T. McKissick, L. Robbins. *Third Row, Left to Right:* J. O'Connor, N. Peters, W. Moore, R. Ryon, R. Arner, D. Gross, E. Gettinger, A. Cattano, B. McAdams, N. Bybel, D. Horchos, C. Granito, R. Green, P. Woolslayer, H. Snodgrass.

Members not shown: L. Bremer, R. Dansey, T. Dougherty, J. Faunce, K. Giulian, J. Norante, W. Young, R. Hirshberg, D. Jamison, S. Johns, J. Kouten, H. Slagle, H. Wagemaker, R. Alemian, J. Andrew, D. Bosacco, R. Brown, J. Cottrell, D. Coulson, B. Dlutowski, K. Fromme, J. Goedecke, J. Kerr, V. Korba, R. Lindquist, R. Orvald, P. Pellgrino, J. Reid, L. Sellyei, V. Stravino, J. Sube, R. Thompson, D. Goldman, S. Imperiale, P. James, G. Kirchner, J. McKendry, P. Nase, D. Sarrett, J. Savastio, R. Stoneback, W. Warrender, A. Wilde, W. Wosnack.

Phi Chi

The Phi Chi Medical Fraternity was founded at the University of Vermont in 1889 and has since grown to become the largest professional fraternity in the United States. Phi Alpha Gamma, one of the oldest fraternal orders at Hahnemann, was incorporated into the National fraternity in 1948, becoming the Phi Alpha Gamma Chapter of Phi Chi. Since that time it has flourished to become the largest of the five medical fraternities at Hahnemann.

The fraternity house at 1624 Summer Street provides quarters for some 15 students and is the locus for a varied program of social activities which include an annual Christmas party for underprivileged children, and a Lectureship Dinner-Dance featuring a discussion by an outstanding authority in the medical profession.

The present membership consists of 94 fraters including many class and organization leaders who strive to keep honor and spirit high and bring credit to themselves and Alma Mater.

'twas the night before the Ides of March.

all through the villa not a dagger was stirring

Evil doers watch evil deed

Brutus rejoices

Caesar lies no more

Front Row, Left to Right: W. Gordon, P. Baute, P. Pironti, C. Stone, N. Turner, A. Ettore. *Second Row, Left to Right:* J. Savastio, J. Geissinger, R. Moscotti, G. Ninos, J. O'Connor.

MEMBERS

Freshmen: P. Ironside, R. Witzig, W. Young, A. Cattano, R. Cavalier. *Sophomores:* W. Barry, C. Diez, M. Earick, W. Figueroa, C. Fogg, F. James, S. Johns, A. O'Connor, P. Pratt, R. Ryon. *Juniors:* L. Barbera, P. Baute, D. Bosacco, R. Brown, D. Coulson, J. DeMatteo, A. DiGiovanni, J. Goedecke, W. Hamaker, D. Harvey, J. Kerr, V. Korba, R. Moscotti, P. Pellgrino, R. Thompson. *Seniors:* J. Bitter, J. Davis, A. Ettore, J. Geissinger, S. Imperiale, P. James, R. Joseph, N. Chapis, P. Nase, G. Ninos, J. O'Connor, P. Pironti, F. Rosato, D. Sarrett, J. Savastio, C. Stone, N. Turner, W. Warrender, A. Wilde, W. Wosnack.

Aesculapian Society

The Aesculapian Society was founded by its first sponsor, Dr. Thomas M. Snyder. A beloved teacher, he practiced and professed that which we quote from him: "The first duty of the teacher is to his students; if a teacher thinks otherwise, he should not teach."

His original intent was to bring together congenial men to informally discuss the history of medicine and thereby acquaint them with the heritage and antiquity of their chosen profession. Six dinner meetings are held during the academic year which are enlivened by distinguished guest speakers chosen by our present sponsors, Drs. Paul Grotzinger, Frank Tropea and William Wilson.

To our sponsors we extend our hand in gratitude and friendship for their guidance and companionship. To the Aesculapians before us, "Greetings!" And to those who follow, "Good Cheer! May we return?"

Alexis Carrel Society

The Alexis Carrel Society is the spiritual organization for Catholic students at Hahnemann. The purpose of the club is to motivate students of Medicine toward the acquisition of sound Catholic moral principles, as related to the practice of medicine, and to provide through its activities means to this end.

Meetings are held monthly, and highlighted by prominent speakers in the fields of religion and medicine. Other religious activities include the Mass of the Holy Ghost and the annual Communion Breakfast.

First Row, Left to Right: P. Pironti, A. Wahlig, H. Soltys, R. DeSilverio, M. Fortuna, J. Shane, F. Pugliese, T. Creamer, M. Earick. ***Second Row, Left to Right:*** F. DiMauro, W. Figueroa, E. Pelszynski, R. Caputo, R. Cavalier, F. Colizzo, A. O'Connor. ***Third Row, Left to Right:*** C. Czarnecki, W. Barry, J. O'Connor, P. Keblish, J. Gindhart, B. McAdams, C. Diez.

A. O. A.

A.O.A., a non-secret medical honor society, was organized at the College of Medicine of the University of Illinois on August 25, 1925 by William W. Root; it is the only order of its kind on this continent. The Zeta Chapter of Pennsylvania was established at the Hahnemann Medical College in 1952.

Undergraduate membership is based on scholarship, personal honesty, potential leadership. Membership can be extended to alumni for distinctive achievement in the art and practice of scientific medicine. Eminent leaders in the field of medicine and/or its allied sciences can be awarded honorary membership.

Since its inception, Zeta Chapter has taken pride in sponsoring the annual A.O.A. Lectureship which brings prominent physicians to address the student body.

Front Row, Left to Right: **J. Kornblum, J. Meisel, A. Spielvogel, S. Smith, J. Shaver, M. Wallen.** ***Second Row, Left to Right:*** **A. Gionti, J. Reid, R. Moscotti, R. Arner, M. Blumberg, G. Glantz.**

First Row, Left to Right: W. Gordon, A. Ettore, P. Pironti, C. Stone, E. Schwartz, G. Ninos, S. Podolsky, J. O'Connor, R. Naughten. *Second Row, Left to Right:* N. Turner, W. Barry, J. Geissinger, R. Moscotti, J. Meisel, M. Wallen, J. Savastio, D. Miller, R. Brandt, A. Farson.

MacFadyen Gynecological Society

The Gyn Society was founded in 1941 and is named in honor of Bruce V. MacFadyen, presently professor of gynecology. Monthly meetings are held and usually feature a speaker of national or local prominence. The group consists of those undergraduate students demonstrating an interest in gynecological topics. This society is one of the oldest and most active at Hahnemann at the present time.

First Row, Left to Right: Ann Alden, Doris Gordon, Nancy Hamaker, Betty Keating, Betsy Phillips, Ann Naughten. *Second Row, Left to Right:* Virginia Jamison, Agnes Kouten, Roberta Walsh, Mary Lou Snodgrass, Mary Jane Kleckner, Barbara Diaz, Nancy Phillips, Adrienne Andrews, Mary Ann Wagemaker, Lois Messey, Helen McKendry, Pat Nasuti, Janet Reed, Sandra Fogg. *Third Row, Left to Right:* Kay Slagle, Lou Hartman, Barbara Harriman, Evelyn Huff, Jeanette Bitter, Pat Boyd, Doris English, June Schaupp, Tracy Carter, Judy Diez, Ingrid May, Barbara Henrie.

Undergraduate Wives Association

The Hahnemann Undergraduate Wives Association was founded in 1950 as an outcome of the Phi Delta Epsilon Wives Club. This club realizing the benefits derived from such an organization opened its membership to include the wives of all undergraduate students at Hahnemann.

The purposes of the organization are to promote friendship and to render service to Hahnemann Medical College by providing needed equipment for teaching purposes. The monthly meetings are held either as a formal meeting at which a guest speaker is present, or as an informal social get-together, thus providing an opportunity for the students' wives to meet each other and get away for awhile from the clinical atmosphere which follows each husband home.

Our organization has been a rapidly expanding one, and one which we hope in future years will be of even greater service to Hahnemann.

Undergraduate Research Society

The Undergraduate Research Society was formed 13 years ago, the first organization of its kind in a medical school. Any undergraduate interested in research may carry out a project during the summer months in one of the basic sciences or in a clinical field under the supervision of a faculty member. Approximately fifteen students are chosen each year to present papers on their research findings to the student body and faculty on Undergraduate Research Day.

First Row, Left to Right: A. May, J. Kornblum, R. Naughten. *Second Row, Left to Right:* R. Trivus, N. Schatz, S. Podolsky.

Inter-Fraternity Council

The Inter-Fraternity Council is made up of one representative from each of the five fraternities, usually the president of each. Its major functions are to establish the rules for "rushing," to aid fraternities in any distress, to welcome the freshmen students and to arbitrate all disputes between fraternities or censure any group whose activities are unethical or unfair.

MEMBERS

Alpha Kappa Kappa	E. Pelszynski
Phi Beta Pi	J. Lupas
Phi Chi	P. Pironti
Phi Delta Epsilon	M. Wallen
Phi Lambda Kappa	R. Stern

First Row, Left to Right: M. Wallen, P. Pironti, R. Stern. *Second Row, Left to Right:* J. Lupas, E. Pelszynski.

First Row, Left to Right: E. Schwartz, J. O'Connor, A. Ettore, R. Stern, S. Smith, S. Podolsky, J. Meisel, M. Wallen, B. Fiedler. *Second Row, Left to Right:* P. Pironti, J. Geissinger, W. Gordon, R. Moscotti, C. Stone, D. Miller, R. Gross, G. Nimos, A. Farson, R. Naughten.

Undergraduate Psychiatric Society

The Hahnemann Undergraduate Psychiatric Society was founded in 1952 at the Psychiatric Seminar, which was a student directed group. The present organization is much larger. This Society meets about six times a year with staff psychiatrists directing the discussions, followed by student participation. All Hahnemann undergraduates, their wives and friends are welcome.

The topics during 1958-1959 included "Psychiatry Past, Present and Future" with Dr. Hamnett, "Differentiating Patients Requiring Professional Psychiatric Care" with Dr. West, and "New Tools in Psychiatry" with Dr. Slap. The Society has attempted to supplement the material presented in the formal course, emphasizing the role of the general practitioner, internist, and pediatrician in treating emotional problems.

QUACKERY DOES NOT DIE EASILY. Exposure of frauds perpetrated by quack and nostrum venders do good only to the extent that such exposes educate the public. When the veil of mystery is torn from the medical faker, the naked sordidness and inherent worthlessness that remains suffices to make quackery its own greatest condemnation.

NO PAIN OR ACHE AT 105

Mrs. Louisa Cox, Who Is 105 Years Old, Sleeps Like a Girl, and Says She Does Not Know What It Is to Have a Pain or Ache.

MRS. LOUISA COX.

Her Only Medicine Is DUFFY'S PURE MALT WHISKEY, "The Renewer of Youth."

Harrington, Maine May 20 1904
Gentlemen—I am 105 years old. I am well, without a pain or ache. I sleep as well as I did when I was a girl. I use your whiskey and like it very much. Duffy's Pure Malt Whiskey is the only medicine I use. I get water from the well, bring in wood and do my housework. Mrs. Louisa Cox

4,000 Centenarians Owe Health and Old Age to

Duffy's Pure Malt Whiskey

...ons are 4,000 men and women in this country alone who have passed the hundred year mark and recently every one of them has publicly acknowledged that he or she owes health, strength, continued use of all the faculties, and extreme old age to Duffy's Pure Malt Whiskey. For great cure and preventive of disease the true value of life. We will send you free a booklet containing portraits and letters of many of these old people, and valuable medical information.

If you would be strong and vigorous, and able to enjoy the work and pleasures of life to the fullest extent, you would live to ripe old age without a care and pain, take Duffy's Pure Malt Whiskey as directed and avoid all drugs. Doctors say it is the most powerful and safest tonic in existence and cures all diseases of the throat, lungs, stomach, bowels, nerves and all run-down, debilitated conditions from whatever cause.

It gets well and builds up the whole system. Duffy's Pure Malt Whiskey is sold in sealed bottles only, by druggists and grocers everywhere, including hospitals. The favorite family remedy of hundreds of thousands for over fifty years. Its purity is vouched for by chemists and by the fact that it is the only whiskey recognized by the government as a medicine.

Every testimonial is published in good faith and is guaranteed.

AVOID SUBSTITUTES.

...or sure you get the genuine Duffy's Pure Malt Whiskey, sold in bottles only, by all reliable druggists and grocers or direct, price $1.00. It is the only absolutely pure medicinal Whiskey and contains no fusel oil. Look for the trade-mark, "Old Chemist" on the label, and be certain the seal over the cork is unbroken. Duffy Malt Whiskey Co., Rochester, N. Y.

LET ME REMOVE YOUR GOITRE

$2.50 TEST Treatment FREE

Don't suffer and be disfigured with a "Big Neck." Don't give up hope because other physicians or remedies have failed you. I am curing hundreds of old chronic cases that have resisted all other remedies. My patients everywhere are reporting cures. You may try my $2.50 treatment of my remarkable discovery at my expense. It's absolutely FREE—in plain package—send no money. You will be surprised at how quickly my treatment reduces the size of the goitre and relieves choking and other disagreeable symptoms. It is effective from the first trial. No interference with your work, no danger of any kind, no obligation. SEND AT ONCE.

$2.50 TREATMENT FREE

Fill out and mail this coupon to Dr. W. T. BOBO, 755 MINTY BLOCK, BATTLE CREEK, MICH., and get one $2.50 Treatment FREE by mail.

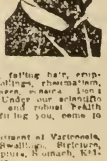
THE ELECTRIC APPLIANCE CO. (Inc. 1891), Burlington, Kansas

Cured in 5 Days, $5

Go to the Specialists of the Copenhagen Medical Institute, 4th and Brady Sts.

MEN We use the quickest cure in the world for certain newly contracted diseases, which we will cure for $5. Make no mistake. Come to us first and avoid wasting your hard-earned cash on worthless medicines or treatments. Consultation free. Call today. Every- thing secret. We furnish medicine free to our patients.



"Old Chronic Cases"

If you have an old case that has been hanging on for months, and which medicines from doctors and druggists can't seem to cure up right, there is some reason. We have a Scientific Cure for these cases and will cure you right, quickly and cheaply. Don't let others drag you down in health and weaken you.

BLOOD DISEASES dorse in the mouth, falling hair, eruptions, pimples, swellings, rheumatism, uric acid, skin diseases, sores. Don't go to Hot Springs, we can cure you cheaper and better. Under our scientific treatment all these troubles disappear quickly, disappear and natural health returns. If others have failed to cure, or are not benefiting you, come to us. We cure permanently, secretly and cheaply.

We have the most modern remedy for the successful treatment of Varicocele, Hydrocele, Nervous Debility, Impotency, Discharges, Painful Swellings, Stricture, Blood Poison, Kidney and Bladder Diseases, Rheumatism, Pain in Back, Piles, Rupture, Stomach, Kidney and Liver Diseases, and all special diseases of men.

YOU CAN'T GET ANY BETTER TREATMENT ANYWHERE AT ANY PRICE,

Copenhagen Medical Institute

KNOW THE CAUSE OF YOU AILMENT

FREE!

Diagnosing disease by examining the urine has proven a great benefit to suffering humanity as the test of urine reveals the cause of your ailments. When the cause is removed, the road to health is short and quick. A. W. VanBysterveld, the inspector with this Company, has spent a lifetime in examining human urine and so accurate has he become that the patient tells nothing, simply send in a sample of the urine, stating age and sex, he will locate the cause of your aches and pains, describing them better than you can explain yourself. Mailing cases for sending urine and booklet sent free on request.

WEAK EYES
SORE EYES
BLIND EYES
CROSS EYES
CURED

The Oneal Dissolvent Treatment

is a combination of mild and harmless medicines that dissolve all unnatural growths in and on the eye, such as Cataracts, Scums and Films, and strengthen the sight. In cases of Weak, Watery or Sore Eyes, and Diseases of the Optic Nerve its curative value is remarkable

Mrs. S. C. WILLARD, of Libertyville, Ill., was cured of Blindness caused by Cataracts on both eyes. IRA MERCHANT, Bloomington, Ill., says, "Dr. Oneal's Treatment for Cataracts is wonderful."

Have cured thousands. No knife No pain No risk Write to-day Now illustrated book, and professional opinion free. Describe your case carefully

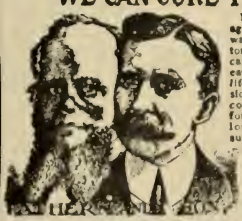
Dr. Oren Oneal

Suite 220. 52 Dearborn St., CHICAGO

The sad story of MY FATHER'S GREAT SUFFERING FROM CANCER

Read the following and be convinced

WE CAN CURE YOU.



Forty five years ago my father who was himself a doctor, had a vicious cancer that was eating away his life. The best physicians in America could do nothing for him. After nine long years of awful suffering, and after the cancer had totally eaten away his nose and portions of his face (as shown in his picture here given) his palate was entirely destroyed together with portions of his throat. Father fortunately discovered the great remedy that cured him. This was over forty years ago, and he has never suffered a day since.

This same discovery has now cured thousands who were threatened with operation and death. And to prove that this is the truth we will give their sworn statement If you will write us. Doctors, Lawyers, Mechanics, Ministers, Laboring Men, Bankers and all classes recommend this glorious life-saving discovery, and we want the whole world to benefit by it.

Send Me a Dollar!

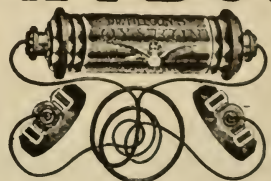
When you wrote us for treatment we sent you some free Then when your symptom blank came we decided that you urgently needed regular treatment. What did we do? Keep writing you letters about it asking for money in advance and wasting your time and postage, while giving your disease a chance to get worse?

NO!

We sent you the treatment you needed and prepaid the charges The company took the chances, not you. How did we come out of the transaction? Very badly We lost all around We went to great expense and got nothing for it. Now we ask you kindly to

Help Pay Expenses

OXYBON



Something New! Different! Unexpected! Wonderful!

READ! LISTEN! DON'T MISS! INVESTIGATE!

Here is the best thing ever happened Hundreds of years coming—here at last. So startling you may not believe it at first—yet absolutely true.

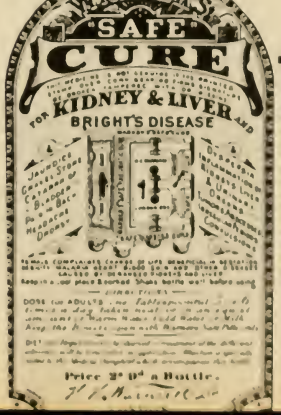
DIRECTIONS IN SEVEN LANGUAGES ON LABEL



THE GREAT AMERICAN FRAUD

Every man who trades in this market, whether he pockets the profits of the maker, the purveyor or the advertiser, takes toll of blood. He may not deceive himself here, for here the patent medicine business is nakedest, most cold hearted. Relentless greed sets the trap and death is partner in the enterprise.

HAHNEMANN MEDICAL COLLEGE

On the Synthesis of Modern Doctors

In addition to making sick people well and affording clinical experience to student doctors, the service phase of the teaching hospital has a third vital function. It is one to which little formal reference is ever made, probably because it involves relationships and attitudes of so personal and individual a nature that they cannot be dealt with in class nor even in group discussion. I am referring to what has been called the priestly functions of the doctor. It is what Schweitzer means by the "ethics of reverence of life." It is a kind of spiritual quality. For me it is all in the one word "compassion." And it is in the hospital where you lay your hands on sick people for the first time that you will begin to feel it. I hope you will see in it the great good thing it is and that you will let it flower in you to the full. It will not let you become complacent nor satisfied. It is certain armor against assuming anything, against taking anything for granted. It will assure you against easy, slipshod practices whereby you may do less than all you can for every one who trusts you as his doctor. It will effectively antidote any tendency to take a chance. It will force you to regard all who come to you with respect, to encourage their confidences and when you have them to keep them sealed. It will deny to you the luxury of querulousness and impatience with those who are ill. It will make you heedless of the clock when you are fighting for a life. And when you know you are going to lose, it will never allow you to abandon a patient by saying: "There is no more I can do." Compassion will always find something more to do and will serve you with the spirit to do it.

Compassion and science are poles apart, and as medical practice becomes increasingly scientific, compassion risks dilution. Yet the heart and the mind can be blended and where they are, there stand the best of the noblest profession.

—Excerpt from "Some Observations on the Synthesis of Modern Doctors"
An Address given by Dean Charles S. Cameron, M.D.

Through the recounting of our impressions, experiences and even frustrations, we are able to envisage the reality of our accomplishments during our student years at Hahnemann Medical College.

Day by day one cannot see what he is doing or where he is going; each day seems unprofitable in itself and on no calendar day can we see that we began to understand and correlate theory with our clinical experiences. Our development as professional men and women both theoretically and culturally seems to us trivial and we shun to record it; but if it were to be left unrecorded we might lose sight of the ideals and objects with which we began our study in the medical field.

Our frustrations and inspirations, the unexpected miracle of finding our own genius or detecting our deficiencies, the unforgettably long hours of study and exacting work, the personal conflicts with which we are faced are not lost in the futurity of our thinking but may be recounted by the mere leafing through of these pages.

The HAHNEMANN MEDICAL COLLEGE and HOSPITAL of PHILADELPHIA

is approved by the Council of Medical Education and Hospitals of the American Medical Association and The Association of American Medical Colleges.

The curriculum provides comprehensive four-year training in the medical sciences leading to an M.D. degree.

Graduate courses in the Basic Medical Sciences are offered to qualified applicants leading to a Master of Science and Doctor of Philosophy degrees.

Applicants desiring admission to the College are required to have a baccalaureate degree or the equivalent thereof from an accredited College or University.

Catalog and additional information may be obtained from:

CHAIRMAN OF ADMISSIONS COMMITTEE

Philadelphia 2, Pa.

The Next Academic Session Will Begin September, 1959

He bets on molecules

When William Bruce searches for new molecular formations in drugs, he knows he often plays a game of chance with the unknown. Dr. Bruce is one of an army of ceaselessly exploring scientists in his section of the Research and Development Division of Wyeth.

In these uncharted regions of organic synthesis, Dr. Bruce finds that compounds of great promise do not always result in clinical breakthroughs.

Take the case of WY-1292. This was one of a group of selenium analogues of cystine synthesized by Dr. Bruce and his associates in an effort to develop an improved agent for leukemia. After a score of derivatives of the parent compound had been created and screened, clinical drawbacks were acknowledged. The process had consumed many man-hours of organized effort. Disappointment was natural. Antileukemic action had been successfully demonstrated, but leukemic cells were shown to acquire increasing resistance to the drug. So this is an agent you'll never see.

Every research scientist has a dogged instinct to penetrate nature's barriers. Dr. Bruce and his fellows at Wyeth are responsible for a constant flow of compounds, some of which represent victories in the obstetrics of research. These are the Wyeth drugs that permit improved care of patients.

THE FIRST HOURS OF TOMORROW

In what area of medical science will tomorrow's big "breakthrough" come? Virology? Coronary and renal disease? Mental health?

For the past 20 years we've watched research roll back one problem area after another. But research is already projecting today's accomplishments into tomorrow's benefits.

We can expect medical progress to continue as long as research recognizes today as the first hours of tomorrow.

S.K.F. Medical Color TV . . . an aid to postgraduate medical education

If all the programs presented on S.K.F. Medical Color Television could be assembled in one book, you would have at your finger tips the collective experience, in almost every field of medicine, of many of the world's most eminent physicians.

The continuing aim of S.K.F. Medical Color Television is to make available its facilities and technical skills to these physicians so that they can present to you, at medical meetings, the latest in medicine and surgery.

Before the end of our next decade in this medium, we hope that you will appear not only in the audience . . . but also in front of our cameras.
